

FOLDING

Prefolds

Dotted lines indicate thick centre panel.

Fold down top third of nappy

Then fold up bottom third of nappy

Place folded nappy into wrap, and use wrap to secure.

For Newborns:

The following fold makes a prefold a bit more secure for a newborn, particularly if breastfed. Again, dotted lines indicated thicker central panel.

Fold up bottom third of nappy. For newborns, fold up bottom half, and shorten the fold as your baby grows.

Fold left side panel over thick centre panel.

Then fold right side panel over, tucking it into the first folded side panel. This locks the sections together for a better fit.

Next, open the overlapping back section. Place the baby on the nappy with the wide top section centred at the baby's legs.

Bring the wide back ends of the nappy over the baby's hips and pin to the front section. Ease the front pad section wider if necessary to comfortably fit round baby below the tummy button. While pinning the nappy, insert your finger(s) between the nappy and the

baby for baby's protection.
